

Module	API Name	HTTP Method	Endpoint URL	Description	Request Parameters	Request Body	Response Body	Status Codes	Auth Required	Sample cURL
Authentication	Login	GET	/users	Authenticate user by email, password, and role	email (string) password (string) role (string)	None	{ "id": "string", "email": "string", "role": "string", "phone": "string" }	200: Success 404: Not Found	No	curl -X GET " http://localhost:3000/users?email=waiter1@gmail.com&password=w123&role=WAITER "
Authentication	Register User	POST	/users	Register a new user	email	{ "email": "string", "password": "string", "phone": "string", "role": "string" }	{ "id": "string", "email": "string", "role": "string", "phone": "string", "password": "string" }	201: Created 400: Bad Request	No	curl -X POST " http://localhost:3000/users " -H "Content-Type: application/json" -d '{"email":"user@test.com","password":"pass123","phone":"9876543210","role":"CUSTOMER"}'
Authentication	Check Email Exists	GET	/users	Check if email exists for a role	email (string) role (string)	None	{ "id": "string", "email": "string", "role": "string" }	200: Success	No	curl -X GET " http://localhost:3000/users?email=test@test.com&role=CUSTOMER "
User Management	Get All Users	GET	/users	Get all users (excluding managers in service)	None	None	{ "id": "string", "email": "string", "role": "string", "phone": "string", "password": "string" }	200: Success	Yes (Manager)	curl -X GET " http://localhost:3000/users "
User Management	Get User by ID	GET	/users/:id	Get specific user details	id (path parameter)	None	{ "id": "string", "email": "string", "role": "string", "phone": "string", "password": "string" }	200: Success 404: Not Found	Yes	curl -X GET " http://localhost:3000/users/C001 "
Menu	Get Menu Items	GET	/menuitems	Retrieve all menu items	None	None	{ "id": "string", "name": "string", "description": "string", "price": number, "image": "string" }	200: Success	No	curl -X GET " http://localhost:3000/menuitems "
Bookings	Get All Bookings	GET	/bookings	Get all bookings (filtered by date/customer in service)	None	None	{ "id": "string", "customerId": "string", "bookingTime": "string", "numberOfPeople": number, "status": "string" }	200: Success	Yes	curl -X GET " http://localhost:3000/bookings "
Bookings	Get Bookings by Customer	GET	/bookings	Get bookings for specific customer	customerId (string)	None	{ "id": "string", "customerId": "string", "bookingTime": "string", "numberOfPeople": number, "status": "string" }	200: Success	Yes (Customer)	curl -X GET " http://localhost:3000/bookings?customerId=C001 "
Bookings	Create Booking	POST	/bookings	Create a new table booking	None	{ "customerId": "string", "bookingTime": "string", "numberOfPeople": number }	{ "id": "string", "customerId": "string", "bookingTime": "string", "numberOfPeople": number, "status": "CONFIRMED" }	201: Created 400: Bad Request	Yes (Customer)	curl -X POST " http://localhost:3000/bookings " -H "Content-Type: application/json" -d '{"customerId":"C001","bookingTime":"2026-03-15T19:00:00","numberOfPeople":4}'
Bookings	Update Booking	PATCH	/bookings/:id	Update booking details	id (path parameter)	{ "bookingTime": "string", "numberOfPeople": number }	{ "id": "string", "customerId": "string", "bookingTime": "string", "numberOfPeople": number, "status": "string" }	200: Success 404: Not Found	Yes (Customer)	curl -X PATCH " http://localhost:3000/bookings/1 " -H "Content-Type: application/json" -d '{"bookingTime":"2026-03-16T20:00:00","numberOfPeople":5}'
Bookings	Cancel Booking	PATCH	/bookings/:id	Cancel a booking	id (path parameter)	{ "status": "CANCELLED" }	{ "id": "string", "customerId": "string", "bookingTime": "string", "numberOfPeople": number, "status": "CANCELLED" }	200: Success 404: Not Found	Yes (Customer)	curl -X PATCH " http://localhost:3000/bookings/1 " -H "Content-Type: application/json" -d '{"status":"CANCELLED"}'
Orders	Get All Orders	GET	/orders	Get all orders	None	None	{ "id": "string", "tableId": "string", "waiterId": "string", "items": Array, "status": "string", "time": "string" }	200: Success	Yes (Chef/Waiter)	curl -X GET " http://localhost:3000/orders "
Orders	Get Orders by Waiter	GET	/orders	Get orders for specific waiter	waiterId (string)	None	{ "id": "string", "tableId": "string", "waiterId": "string", "items": Array, "status": "string", "time": "string" }	200: Success	Yes (Waiter)	curl -X GET " http://localhost:3000/orders?waiterId=W001 "
Orders	Create Order	POST	/orders	Create a new order	None	{ "tableId": "string", "waiterId": "string", "items": [{"itemId": "string", "quantity": number}] }	{ "id": "string", "tableId": "string", "waiterId": "string", "items": Array, "status": "PENDING", "time": "string" }	201: Created 400: Bad Request	Yes (Waiter)	curl -X POST " http://localhost:3000/orders " -H "Content-Type: application/json" -d '{"tableId":"T1","waiterId":"W001","items":[{"itemId":"1","quantity":2}]}'
Orders	Update Order Status	PATCH	/orders/:id	Update order status	id (path parameter)	{ "status": "string" }	{ "id": "string", "tableId": "string", "waiterId": "string", "items": Array, "status": "string", "time": "string" }	200: Success 404: Not Found	Yes (Chef/Waiter)	curl -X PATCH " http://localhost:3000/orders/1 " -H "Content-Type: application/json" -d '{"status":"PREPARING"}'
